means for displaying the pausing job;  
means for specifying at least one job among the displayed jobs; and  
wherein the job execution control apparatus is configured for executing a plurality of jobs in a parallel manner and is further configured for pausing at least one of the plurality of jobs independent of the remaining plurality of jobs.

B<sup>2</sup>

11. (Amended) A job execution control apparatus comprising:  
means for storing a first condition satisfied by a job which is stopped without any restriction in response to a predetermined event and a second condition satisfied by a job which pauses in response to the predetermined event;  
means for stopping the job satisfying the first condition in response to the predetermined event;  
means for making the job satisfying the second condition pause in response to the predetermined event;  
means for displaying at least the pausing job;  
means for designating at least one job from the displayed jobs to stop, or restart the designated job; and  
wherein the job execution control apparatus is configured for executing a plurality of jobs in a parallel manner and is further configured for pausing at least one of the plurality of jobs independent of the remaining plurality of jobs.

B<sup>3</sup> 13. (Twice Amended) A job execution control apparatus, comprising:

display means provided with a touch panel function, for displaying information related to one job that is being executed;

means for displaying a button for instructing a stop of the one job on the display means;

means for stopping the one job when a touch operation is carried out with respect to the displayed button;

a predetermined key provided on a portion except for the display means;

means for storing a condition of a job which is directed to a pausing job; and

means for making the job which satisfies the condition pause when the predetermined key is operated; and

wherein the job execution control apparatus is configured for executing a plurality of jobs in a parallel manner and is further configured for pausing at least one of the plurality of jobs independent of the remaining plurality of jobs.

14. (Amended) A job execution control apparatus comprising:

means for storing a condition of a job which is directed to a pausing job;

means for making the stored job pause in response to a predetermined event;

means for displaying the pausing job; and

means for specifying at least one job among the displayed jobs; and

wherein the job execution control apparatus is configured for executing a plurality of jobs in a parallel manner and is further configured for pausing at least one of the plurality of jobs independent of the remaining plurality of jobs.

SW  
C 15. (Amended) A job execution control apparatus comprising:  
means for storing an attribute of a job which is directed to a pausing job;  
means for making a job having the stored attribute pause in response to a  
predetermined event;  
means for displaying the pausing job; and  
means for stopping at least one job among the displayed jobs; and  
wherein the job execution control apparatus is configured for executing a plurality  
of jobs in a parallel manner and is further configured for pausing at least one of the  
plurality of jobs independent of the remaining plurality of jobs.

B4  
end  
16. (Amended) A job execution control apparatus comprising:  
means for storing a condition of a job which is directed to a pausing job;  
means for making the stored job pause in response to a predetermined event;  
means for notifying at least an identifier of the pausing job to an instruction  
apparatus; and  
means for stopping at least one job instructed by the instruction apparatus  
among the pausing jobs; and  
wherein the job execution control apparatus is configured for executing a plurality  
of jobs in a parallel manner and is further configured for pausing at least one of the  
plurality of jobs independent of the remaining plurality of jobs.
